

Technology

Congratulations on deciding to do a technology project!

1. Begin your research in several places (books, magazines, the Internet) to find out as much as possible about the history of technology and the people who had something to do with inventing and developing it.
2. Start researching your own topic (e.g., if you plan on building a bridge, you should find out as much as you can about the topic).
3. Plan how to construct your model. Include detailed diagrams.
4. Make a list of materials that you think you will need to build your model.
5. Keep a diary / journal of your work.
6. Collect the materials that you need.
7. Begin building your model. Make as many changes to your initial plan as you need to but make sure you record it.
8. Create your science display board or written assignment.
9. Be sure to include the following information with your final project:
 - a. Title
 - b. What you wanted to do / find out (purpose)
 - c. Hypothesis
 - d. Procedure
 - e. Pictures and drawings
 - f. Materials
 - g. What you learned (Conclusions)
 - h. Charts and Tables
 - i. Diary / Journal
 - j. Who helped you
 - k. Bibliography
